

# VANCOUVER'S ELECTRIC VEHICLE ECOSYSTEM

Making vehicle-charging easier will support our shift to **renewably powered transportation** before 2050

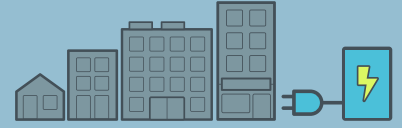

## WHY?

Electric vehicles (EVs) are quiet and emissions-free. They're more popular than ever, and set to really take off.

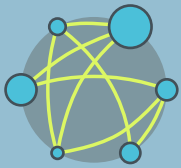

People often worry about where to charge when they're out and about. Some can't charge at home easily: they live in a condo, or don't have a garage.

We want to make it convenient and worry-free to charge up, by helping homeowners, stratas and businesses install chargers.

## WHAT'S AN EV "ECOSYSTEM"?

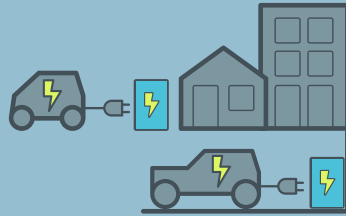

In nature, an ecosystem serves the different needs of every living thing within it. An EV "ecosystem" is the same: the right type of station, when and where you need it.

You'll be able to charge up almost anywhere. More (and better-located) stations mean you shouldn't have to wait long, or at all.

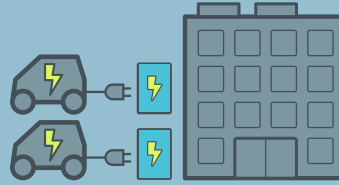

## CHOICES!

Need to charge your EV at home? At work? At a community centre, or out shopping? Quick pit-stop for coffee? There's a charger for that (or there will be).

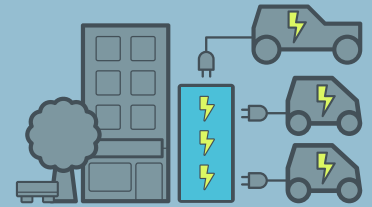

### HOME

Condo-parkade charger incentives  
Charging-ready home garages

### WORK

Workplace charger incentives  
Charging-ready commercial buildings

### PUBLIC

"EHubs" for fast, on-the-go charging

## WHAT DOES THIS MEAN FOR YOU?

### FILL-UP FOR LESS

"Fill-up" an EV at a public station for less than half the cost of gasoline. Charge up overnight at home for even less. With fewer moving parts, EVs also cost less to maintain.

### CLEANER AIR

The air we breathe affects our health and well-being. As Vancouver continues to grow, we need to protect our air quality: among the best of any major city in the world.

### SEAMLESS CHARGING

More available stations and more choice means EVs will fit right into our everyday lives. Like plugging in your cellphone, charging up your car will become second-nature.
